This CCC ONE™ Market Valuation Report was prepared for Esurance by CCC Information Services Inc. The CCC ONE™ Market Valuation Report reflects CCC's opinion as to the value of the loss vehicle. CCC has been preparing market value reports for the insurance industry since 1981.

The Base Vehicle Value is derived from comparable vehicle(s) available or recently sold in the marketplace at the time of valuation, with adjustments made to reflect the loss vehicle configuration.

7 comparable vehicle(s) were utilized in this report.

The loss vehicle has been valued in the North region where it was garaged as a older passenger car with 36% less than average mileage of 184,900.

VEHICLE ALLOWANCES

Allowances are factors influencing the value of the loss vehicle when compared to a typical vehicle. The typical vehicle is a vehicle of the same year, make, and model as the loss vehicle, including average mileage, and all standard and predominant equipment. These allowances are displayed for illustrative purposes only.

The Base Vehicle Value is calculated from the comparable vehicles with adjustments to reflect the loss vehicle configuration.

VEHICLE CONDITION / REFURBISHMENTS

Esurance uses condition inspection guidelines to determine the condition of key components of the loss vehicle. These guidelines are based upon geographic region, age, and vehicle type. The guidelines describe physical characteristics for the major vehicle components. Based on these guidelines, Esurance has determined the condition of the vehicle prior to the loss. Inspection Notes reflect additional observations from the appraiser regarding the loss vehicle's condition. CCC makes dollar adjustments that reflect the impact the reported condition has on the value of loss vehicle. These dollar adjustments are based upon interviews with dealerships across the United States.

Esurance also identifies the after factory options and upkeep dollars invested into the loss vehicle that were brought to its attention. CCC makes dollar adjustments that reflect the impact these items have on the resale value of the vehicle, not the replacement value of these items. Maintenance work done to the loss vehicle may not necessarily add to the value of the loss vehicle.

NHTSA VEHICLE RECALL

The National Highway Traffic Safety Administration has issued 2 safety related recall notices that may apply to the above valued vehicle.

NHTSA ID: 93V015000

ISSUED: 02/01/1993

NO. OF VEHICLES: 375,000

The malfunction or failure of a coolant system component results in significantly increased coolant temperature and a resulting increase in system pressure. Vehicles operated under this increased cooling system pressure condition can suffer damage or failure of parts of the cooling system such as (1) leakage from a coolant hose, (2) leakage of the radiator or expansion tank, (3) disconnection of a hose from a pipe or a fitting, and (4) cracks in the heater core end piece resulting in coolant leakage. In some cases, boiling coolant can contact the lower Right leg of the Driver resulting in burns. Also, escaping coolant in the passenger compartment can cause vapor fogging of the interior surface of the windows, reducing Driver visibility. BMW is currently developing an engineering solution to the problem of excessive pressure in the coolant system. System: Coolant system. Vehicle Description: Passenger cars.

NHTSA ID: 86V151000

ISSUED: 11/07/1986

NO. OF VEHICLES: 97,300

Brake light switch could overheat, eventually leading to melting of plastic internal parts in area of electrical contacts. Consequence of Defect: Switch plunger could jam rendering brake lights either inoperative or continuously illuminated regardless of brake pedal operation. Replace brake light switch with revised switch with increased electrical load capacity. System: Brake light switch. Vehicle Description: Passenger cars with high brake lights.

VALUATION METHODOLOGY

Esurance has provided CCC the VIN (Vehicle Identification Number) of the loss vehicle and the vehicle owner's zip code, which determine the market(s) that CCC used in the valuation. Using this information, CCC searches its databases to find comparable vehicles in these markets. CCC's database includes vehicles for sale at dealerships that CCC has physically inspected, as well as dealer and private party advertised vehicle information from numerous resources including AutoTrader.com®. Esurance has also provided CCC with the configuration of the loss vehicle, including equipment, odometer, condition, maintenance, etc. Vehicles located are compared to the loss vehicle, and adjustments are made for differences such as model/trim, equipment, and odometer. The comparable vehicles are also adjusted for condition to a common condition baseline. Using the adjusted values of the comparable vehicles, CCC calculates the Base Vehicle Value.

The Base Vehicle Value is the weighted average of the adjusted values of the comparable vehicles based on the following factors:

- > Source of the data (such as inspected versus advertised)
- > Similarity (such as equipment, odometer, and year)
- > Proximity to the loss vehicle's primary garage location
- > Recency of information
- > Comparable vehicles used in the determination of the vehicle value are not intended to be replacement vehicles, but are reflective of the market value.

The Adjusted Vehicle Value is determined by adjusting the Base Vehicle Value to account for the actual condition of the loss vehicle and its other reported attributes, if any, such as refurbishments, after factory equipment, and unrelated prior damage.

Please review the information in this Valuation Detail to confirm the reported mileage, condition and to verify there are no missed options, added equipment or refurbishments, or other aspects of the loss vehicle that may impact the value.
